Inclusive, seamless fit

- A range of breast shield and insert sizes for every mom***
- Silicone shield gently shapes to your breast

Hands-free

Single Electric Breast Pump

SCF531/11

Highlights

Mimics baby's drinking rhythm

Babies know how to drink best! That's why our hands-free electric breast pump mimics their natural drinking rhythm – so you can find your own rhythm for effective* expression and optimal milk output. Pumping up to 85 times per minute, the Philips Avent Hands-free Breast Pump is 2x faster than most other pumps**.

Hospital-strength motor

The motor unit delivers the hospital-strength power you expect from a traditional breast pump, yet from a compact and wearable unit. With its rechargeable battery, the cordless motor unit pumps powerfully and discreetly anywhere.

Unique SkinSense shields

Our unique SkinSense silicone breast shield is designed for ultimate comfort, softly shaping around your breast using your body's natural warmth. The breast shield is made with food-grade silicone for complete peace of mind.

Transparent collection

The see-through collection cup provides an unobstructed view inside. It helps you correctly place your nipple for your best milk output, and visually track the volume of breastmilk. For confident pumping from the first drop until finish.

Ultra-light collection cup

Our collection cup weighs just a little over 100 grams when empty - up to 3x lighter than a fully wearable breast pump. The cup sits comfortably in-bra with barely a sign it's there.

Wear it your way

Our pump comes with a braided carrying cord and apparel clip for wearing the motor unit cross-body or attached to your waistband. With the freedom to wear it your way, you stay in your flow knowing control is right by your side. Use the tube coupler and cord adjuster to precisely fine-tune your fit.

Personalized pumping

Get the most from every session with 8 modes for stimulating the flow of milk and 16 modes for expressing it. You can fine-tune as you pump, and with your ideal setting automatically memorized, your pump is always ready to go.

Easy to clean and assemble

We designed our pump and parts to be as simple to live with as possible. With only a few connecting pieces, each collection cup is a breeze to take apart, clean (by hand or dishwasher) and put back together.

Find the right fit

We support every mom to feel their best and having the right fit is an essential part of that. Our range of breast shields and shield insert sizes fits 99% of moms. Available to buy separately, you can experience your ultimate comfort while pumping.
